Hiring organization
HiTech Consulting

Date posted
March 24, 2022

- A global full-service digital consultancy firm. Their global team is dedicated to delivering seamlessly integrated strategies, immersive user experiences, cross-platform development, deployment, training, and ongoing support. They have a results-focused approach which allows them to understand the client needs, shape digital strategies, and forge a path to deliver business success.

Responsibilities

- Work within an Agile and/or Waterfall environment to identify any issues with product/testing requirements
- Prepare / assist with preparation of all prescribed QA artifacts including, but not limited to, master test strategy and plan, functional test plan, QA acceptance plan/sign off, defect tracking report
- Prepare and participate in automation, performance, and security testing as required
- Participation and / or review of documentation and/or test results in all QA test phases such as requirements validation, Unit, Integration, functional, and regression testing

Qualifications

- Experience with testing APIs using API testing tools such as Postman
- Experience with automated test scripting and implementation using BDD frameworks such as Behat or Cucumber
- Experience with web application testing (browser compatibility, responsive testing, etc.)
- Experience with DevOps principles and practices is a plus

Skills

- 5+ years of formal testing experience
- 3+ years of test automation experience
- Strong SQL skills and experience with relational databases
- Experience with Python scripting and Pytest
